

Value Stream Analysis

The purpose of value stream analysis is to visualize, analyze, and improve the end-to-end steps required to deliver a product or service so that an organization can eliminate waste and maximize customer value.

This goal can be accomplished in many different ways but the most common is utilizing the value stream mapping tool. When used effectively, this analysis and toolset can help organizations and individuals to better understand material and information flows as well as current processes, identifying opportunities for improvement.

Using Value Stream Mapping, teams can streamline processes, reduce lead times, and lower operating costs, driving measurable operational improvements.

Participants Will:

- Identify the current state of flow, understanding value and wastes within your processes
- Analyze all products from a system-wide perspective
- Map material and information flows across the value stream
- Design a blueprint for lean transformation with a future-state map
- Prioritize activities to achieve the future-state goals

Topics Covered:

- Introduction to the Value Stream Mapping methodology
- Mapping material and information flows across all manufacturing steps, including finished product delivery
- Identifying opportunities to streamline processes, reduce lead times, and lower operating costs

We Can Help.

- Advanced Manufacturing & Technology Deployment
- Business Growth, Innovation & Marketing
- Business & Operational Assessments
- Cybersecurity Strategies
- Defense Industry Initiatives
- Environment, Energy & Sustainability Services
- Evaluation Services & Resource Development
- Industrial & Systems Engineering
- Instructional Design
- Leadership & Organizational Development
- Management Systems & Quality
- Process Optimization & LEAN
- Project Management
- Southeastern OSHA Training Institute Education Center
- Supply Chain & Supplier Matching
- Workplace Health & Safety

Duration:

• 8 Hours | 1 Day

Format:

• Customized on-site, in-person instruction

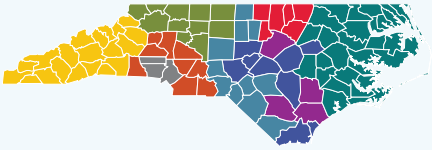

Recommended For:

• Anyone responsible for initiating or leading lean, including CEOs, general managers, production managers, controllers, engineers, and materials managers. Suggested follow-up: an in-plant value stream analysis.
